

Groups (/topics/139-groups/)

Groups are boxes that help you organize your graph.

To create a group, select an area on the graph while holding the Ctrl key, or Cmd on Mac.

You can give each group a title that will be legible even when zoomed out.

You can select all items in a group by double-clicking its header.

When using the Unity control scheme, you can move the group without moving its contents by holding the Alt key and dragging its header.
